works with the following products

JRX200
PRX400
STX800
EON
PRX700
VRX900

Aluminum Tripod Speaker Stand with Secure Locking Pin and 150 lbs Load Capacity

Innovative Lift Ring

To assist you in lifting your speaker, we've added a durable Lift Ring on the telescoping tube to give your upper hand something to push against when raising the speaker to the desired height.

Lightweight Aluminum Tubing

In addition to being able to handle heavy loads, the JBLTRIPOD-MA is easy to carry from gig to gig because it's made from strong, yet lightweight aluminum. Even though it's so light and convenient to carry, it does not sacrifice strength, rigidity or durability - it's Hard Coat Anodized finish means it will not rust or corrode.

Safe and Secure

JBLTRIPOD-MA features an ergonomic "Z" knob for tightening the tripod legs into place and the telescoping tube to the exact desired height. For added security, we've added a locking pin mechanism that ensures the position of the telescoping tube. With a JBLTRIPOD-MA, your speaker will always be safe and secure, exactly where you want it to be!

Strong Speaker Stand!

In our load tests - performed dozens of times - the JBLTRIPOD-MA does not show failure until well after its load capacity is applied. Long after most stands in its price range fail, the JBLTRIPOD-MA will continue to perform and securely hold your speakers.
