

SE-08 is suitable for sound engineering, TV broadcasting system, computer network system and power facilities in order to power distribution system. Power sequence controller can according to the front stage to stage one by one order boot device, unified management so that we can effectively control all kinds of electrical equipment, to avoid human error operation, so as to ensure the power system stability and operation is simple.

Feature

- Power Sequence 8 Channel
- 100V-240V voltage universal
- Using 30A quality relay, single channel maximum output 30A
- High power line, to meet the use of large power system
- Chip control, dual panel chip circuit design, stable and reliable
- Universal socket, suitable for all types of plugs to use

Specifications

Model	SE-08
Input power	AC 110V-220V 50Hz-60Hz
Control capacity	the maximum output current 30A
Control roads	8 road controlled output
Timing interval	each interval 1 second
Dimensions	480 x 185 x48 mm
Weight	4.0KG
